

YOUR HVAC PROS

6 REASONS FOR PREVENTATIVE MAINTENANCE

1

Energy Savings: Some business owners might look at a preventative maintenance program and think it is a waste of money, but a proper preventative maintenance program can save that money on your energy bills and with proper working equipment.

- Cleaning or replacing filters can reduce energy use by up to 15%.
- HVAC systems account for 39% of the energy used in commercial buildings in the US. Poorly managed units consume approximately 30-60% more energy.

2

Equipment Longevity: Properly maintained equipment lasts longer and will have less breakdowns than unmaintained equipment.

- Regular Maintenance can reduce equipment breakdowns by up to 95%.

3

Productivity in the workplace: Improperly conditioned workspaces can cause productivity to drop. Excessive heat in the kitchen can be dangerous to the health of your employees.

4

Improved Comfort: When lobbies are not at the correct temperature it can cause customers to go someplace else to eat in a more comfortable environment.

5

Healthy Air quality: Changing your filters on a regular basis will help keep the air in your businesses clean.

6

Keeping your system under warranty: All Manufacturers require you to have regular maintenance done on your equipment and if you do not it can void your warranty.
